

Youth Maker Club 2 (YMC)

Short Project Description

As part of the second phase of the Youth Maker Club project, activities will be expanded regionally to a fourth location. This will give young vocational students in the provinces access to innovative extracurricular vocational training.

At the Youth Maker Club (YMC), vocational students can take part in a range of learning activities, such as technical workshops, makeathons, repair cafés, events on the topic of ecological consumption or career guidance.

All young people in the YMC project can acquire the necessary skills for a career in the high-demand tech sector and thus find a better-paid job.

Technical course content includes CNC and woodworking, Arduino and electronics, 3D printing and model making, robots and drones, Python, Raspberry Pi and jewelry design.

As the courses are taught by young mentors, the vocational students experience a completely different peer-to-peer learning environment, which contributes significantly to their personal development.

Project Goal

- Provide informal learning opportunities for vocational students to strengthen their technical skills, digital competences and self-confidence.
