

Strengthening the Vocational Training System in the Republic of Moldova (CONSEPT 5)

Short Project Description

As part of the project, the curricula for five training courses - two in electronics and automation and three in transport - are being fundamentally revised and modernized.

The new curricula are based on the latest industry standards and requirements and place a particular focus on sustainability aspects such as automation, digitalization and greening.

Vocational schools and companies will be more closely interlinked to offer relevant work placements alongside the updated curricula.

The aim is to increase the employment rates of graduates in the selected sectors.

Project Goals

- The private sector provides relevant work placements.
- VET institutions provide labor market-oriented training in the selected sectors. To this end, new occupational and qualification standards are developed, and curricula are updated.
- Learning materials and examination instruments are developed, and teachers are trained on the revised curricula.
- The workshops of the VET institutions are better equipped.
