USD 757'500

Brief description of the project

In Bolivia, many young people from disadvantaged families lack access to qualified vocational training. The Fe y Alegría project enables over 1,200 young women and men to receive training in mechanics and IT at the *Técnico Medio* and *Técnico Superior* levels.

Through practical training, the strengthening of 5 vocational training institutes (ITS) and 5 adult education centers (CEA) as well as cooperation with the state and the private sector, young people's chances of finding employment or self-employment are improving in the long term. In this way, the project contributes to income security, to overcoming poverty and to more equal opportunities on the labor market.

Project goals

- **More equal opportunities in the labor market:** The project improves the income and employment opportunities of young people and women through labor market-oriented technical training in mechanics and IT at intermediate and higher levels.
- **Better use of skills for work and self-employment:** Participants successfully use the technical and practical skills they have acquired to find employment, improve their employment situation or set up their own small business – in close cooperation with local companies.
- **Strong and practical educational institutions:** Vocational training and adult education centers offer high-quality training in mechanics and IT that is closely linked to local working and production conditions.
